Overview

AGCUB4-1/2MANCH half-sleeves: essential fastening for junction cubes

The AGCUB4-1/2MANCH kit includes 4 tapered half-sleeves (105.5 mm female screw connectors) designed for fastening QUA29, QUATRO29 and QUATRO39 beams to AGCUB290 and AGCUB390 junction cubes. These half-sleeves provide a sturdy, stable connection between aluminum beams and 6-way cubes, ensuring reliable attachment when creating three-dimensional structures: scenic grids, multi-level roofs, exhibition stands and architectural installations. Thanks to their keyed conical design, they facilitate assembly and guarantee precise alignment during installation. Essential for fully exploiting the modularity of AGCUB290 and AGCUB390 cubes.

Certified European manufacturing.

Each AGCUB4-1/2MANCH half-sleeve is manufactured in Europe from EN AW-6082 T6 aluminum alloy in accordance with ISO DIN 4113 and TÜV standards. This certification guarantees maximum reliability and safety for your permanent or temporary installations. The quality of the materials and the rigorous quality control applied to each component ensure long-lasting performance and optimal resistance to the mechanical stresses of professional structures.

Quick assembly and disassembly.

The use of conical half-sleeves and keys allows for very quick setup of all types of configurations, combining high strength with impeccable stability. The M12 screw-fastening system ensures a secure connection while making disassembly quick and easy. Ideal for event service providers who need to set up and take down equipment frequently, the AGCUB4-1/2MANCH kit significantly reduces on-site installation time.

Compatible with QUATRO39 and Contestage accessories.

The AGCUB4-1/2MANCH half-sleeves are specifically designed for the AGCUB290 (compatible with the QUA29 and QUATRO29 series) and AGCUB390 (compatible with the QUATRO39 series), ensuring perfect compatibility with the entire Contestage line. The kit contains 4 half-sleeves with M12 screws included, but is sold without keys or pins (part numbers CLAV and GOUP available separately).
