Function	Rear stabilization, mechanical rack reinforcement
Included	Reinforcing brackets, slides, complete set of hardware
Standard	Professional 19" rack
Intended Use	Permanent Installations

Overview

Rear Stabilization for Professional Rack Installations.

The AioR2 set provides rear stabilization for 1U AIO matrices (Aio4125, Aio8125) in your 19" rack. These reinforcement brackets securely fasten the rear of the unit, eliminating any risk of tipping or flexing during frequent connector handling. Essential for permanent installations, environments subject to vibration (performance venues, mobile sound trucks), or simply to ensure flawless mechanical stability over time.

The AioR2 can be used in three ways: to stabilize both sides of an AIO 1U 19" matrix, to stabilize both ends of a connection between two AIO 1U 1/2 19" rack matrices, or to stabilize just one side of a single AIO 1U 1/2 19" rack matrix assembly. The AioR2 set is slide-mounted to adapt perfectly to the depth of your rack.

Complete hardware included, compatible with all standard 19" racks.
