Thermographic camera for fever detection

corona

SKU: B09902

Categories: [Security](#)

brand Briteq

- Thermographic camera for fever detection equipped with an inventive 256x192 IRFPA sensor!
- Thanks to Artificial Intelligence, this camera simultaneously scans the temperature of large flows of people.
- Perfect for contactless fever monitoring at the entrance of schools, universities, shopping malls, companies, sports centers/clubs, hospitals, bus/rail stations, concerts, museums, ...
- The included PC software installs easily on any PC, laptop or tablet with the WIN10 64-bit operating system
- Measure the temperature of several people up to 2 m away with an accuracy of 0.5 °C!
- The "fever" alarm is triggered automatically. This feature can be disabled, allowing for manual and discreet tracking.
- A thermal snapshot is recorded when a person with an increased temperature passes by. Also this function can be disabled if your application requires it.
- Measuring range: 30 - 45°C
- Installation takes only a few minutes and operation is very simple!
- **Components included:**
 - Thermal camera
 - Tripod
 - PC software (see downloads for the latest version of the PC software)
 - Mounting rail for camera and tablet
 - USB cable
 - USB-A to USB-C adapter
 - The tablet/PC and wall mount are not included.

Privacy and data protection

This product may have features to process and possibly record personal data (e.g. thermal images and video images).

The use of these features may be subject to local regulations, such as those relating to the processing of personal data, the use of cameras and the confidentiality of electronic communications. Be sure to educate yourself to comply with the applicable rules.

Beglec cannot be held responsible for the use you make of these features.
