BT-FEVERCAM2 PRO

High technology thermographic fever detection system using 2 cameras
corona

Référence: B09903

1090,00 € inc. VAT

- High technology thermographic fever detection system using 2 cameras:
  - 1 thermographic camera equipped with a 256x192 IRFPA sensor
  - 1 Visual light camera equipped with a 1280x768 pixel sensor
- Using artificial intelligence, this camera simultaneously scans the temperature of large flows of people.
- Perfect for contactless fever monitoring at the entrance of schools, universities, shopping malls, companies, sports centers/clubs, hospitals, bus/rail stations, concerts, museums, ...
- In addition, the camera can also check and warn when people without protective masks are detected!
- **The system includes a microcomputer with pre-installed software: simply connect the system to an optional video monitor using the included HDMI cable and you're ready to go!**
- No PC is required, even an IR remote control is included for easy operation!
- Temperature measurement on several targets **up to 4m away** with an accuracy of 0.5°C!
- The automatic "fever" alarm is triggered and a **combined thermo + visual snapshot** is recorded when a person with a high temperature passes by: **very easy to recognize a person with fever!** These functions can be deactivated, allowing a discreet and manual monitoring if your application requires it.
- Measuring range: 30 - 45°C
- Installation takes only a few minutes and operation is very simple!
- **Components included**:
  - Dual lens thermal camera + visual light
  - Tripod
  - Microcomputer with software
  - IR remote control
  - HDMI cable (video monitor or TV with optional HDMI input)
- The monitor screen is not included.
