Use	**indoors**
Color	**black**
Dimensions	**90 × 42 × 42 mm**
Weight	**0.2 kg**

Overview

Keep your projectors' firmware up to date

The FIRMWARE UPDATER 1+ connects your Windows computer to your projectors and DMX effects via a simple USB cable and transmits firmware updates through its 3-pin XLR output. Controlled by the included DMX Tools software, it updates your compatible devices in just a few steps, allowing you to take advantage of the latest performance improvements, bug fixes, and new features for your fixtures.

Multiple devices, one operation

Instead of updating your projectors one by one, daisy-chain them using their DMX IN and OUT connectors: devices of the same type will update simultaneously, in a single pass. This saves time when managing a rental fleet, a permanent installation, or a tour.

A pocket-sized DMX controller for your tests

In addition to updating firmware, the FIRMWARE UPDATER 1+ functions as a compact DMX-512 controller. Connect it to any DMX device and control it manually from DMX Tools to verify its operation, channels, and functions before a setup or during troubleshooting.

Compact and USB-powered

At 9 cm long and weighing 200 g, it fits easily into a tool bag or flight case and plugs directly into a computer. The DMX Tools software is included, and the manual is available for download.

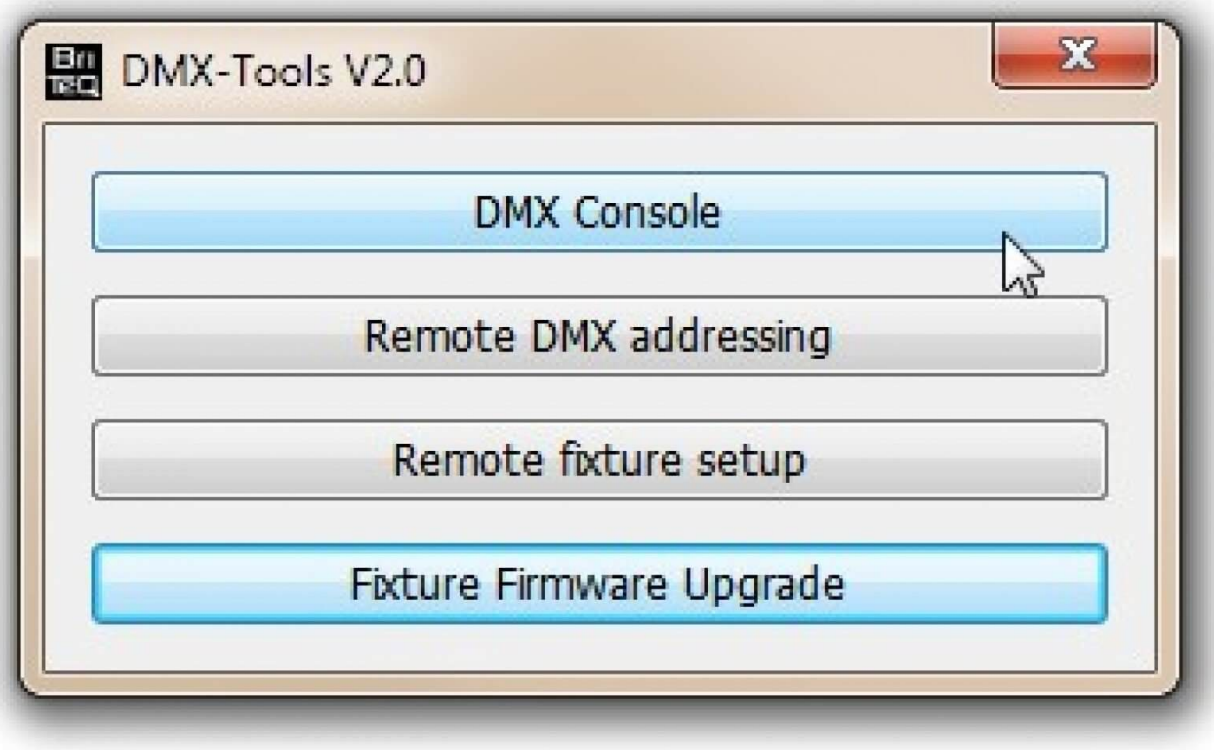

Before ordering:

Briteq offers several models of the FIRMWARE UPDATER. Check the product page for your projector or lighting effect to make sure that the FIRMWARE UPDATER 1+ is listed as a related product.
