Overview

The ultra-compact wall-mounted tablet, compatible with all apps.

The Nexus 4 is a 4-inch square Android touchscreen control panel designed to be flush-mounted on walls in even the smallest spaces. Powered by PoE or AC power, it can be installed without any special wiring requirements. Its 480×480 capacitive touchscreen with 300 nits of brightness ensures clear readability in virtually all indoor lighting conditions.

An open Android device, for all uses.

Running Android 13 with its quad-core Cortex-A55 processor, the Nexus 4 provides access to the Play Store and all available apps: music streaming with Spotify, web radio, or local file playback; lighting control with Sweetlight or similar apps; home automation; room management... Every installation becomes a customized experience, tailored to the site's actual needs.

The Ami control panel, in mini format.

With AmiControl preinstalled, the Nexus 4 instantly becomes the wall-mounted control panel for your Ami system. The installer designs the interface to match the customer's branding—logo, wallpaper, and layout of faders and buttons—for a fully personalized user experience. Wi-Fi, Bluetooth, RS485, and Ethernet round out the connectivity options.
