## About security

[/vc\_column\_text][vc\_empty\_space height="60px"][/vc\_column\_text]**In accordance with standard NF E85-015 :**

- A maximum height of 150 cm is permitted
- A guardrail must be installed if the height to be climbed exceeds 50 cm.

These provisions are not exhaustive. For other requirements, please refer to the standard mentioned above.

### Pay attention to floor capacity:

A loose floor can affect the safety of the installation.

Please distribute loads evenly over the entire platform surface. **About railings and stairs:**

A guardrail must be installed whenever the fall height exceeds 50 cm.

A staircase up to 120 cm wide must have at least one handrail.

### Resistance resistance:

Fire resistance class: BFL-S1 (corresponds to French M1 class).

It complies with European standard EN13501-1+A1:2010 **Resistance resistance:**

The tray is made of birch plywood with a film coating on the underside and an anti-slip coating on the top.

It is designed to withstand splashing water, and therefore occasional rain.

It must not be immersed and installed for long periods or stored outdoors, as this may cause it to swell and reduce its load-bearing capacity.[/vc\_column\_text][/vc\_column\_inner][/vc\_row\_inner][/vc\_column][/vc\_row]
