Overview

Every standard flight case should be equipped with a drawer: this is the ideal solution to store a lot of things... small, but so important!

And yet, we often tend to forget them (cables, tools, batteries, microphones, adapters, etc ...).

To increase its resistance, the drawer can be fixed on the front and rear rails of the rack.

This drawer "slides" easily thanks to telescopic elements.

To prevent theft, the drawer can be locked, and two ad hoc keys are included.

It can be mounted in our rack cases ranging from 4 to 16 units high
