brand Synq

- This stereo DI-box is the perfect solution for many applications!
  - It converts unbalanced audio signals into balanced signals that can be carried on long balanced cables with maximum protection against any type of interference.
  - Humming from electronic devices such as laptops, PCs etc. can be easily solved: the "ground lift" switch separates the inputs/outputs to avoid ground loops.
- This box contains no active components: no noisy operational amplifiers or empty batteries when you need them...
- A ground lift switch for each channel.
- High quality audio frequency transformers producing excellent audio characteristics:
  - Very low distortion:
  - Supports very high audio levels
  - Excellent RRMC (common mode rejection ratio): >80 dB @ 60 Hz
  - Excellent frequency response: 20 Hz - 20 kHz (+/-0.5 dB)
- Versatile connections:
  - Inputs: RCA + COMBO (Jack/XLR) on both channels
  - Outputs: XLR male on both channels
- Robust black anodized aluminum housing
