Technical specifications

Brand	Audiophony
Capsule type	condenser
Transmission type	True Diversity
Frequency range	823 - 832 MHz and 863 - 865 MHz
Output power	10 mW (max.)
Channels	442 programmable, SYNC function
Display	LCD (channel, battery level)
Power	2 AA 1.5 V batteries (not included)
Average runtime	10 hours
Dimensions	260 mm × Ø 54 mm

Overview

A wireless handheld mic built for the stage.

The UHF410-Hand-F8 is a wireless handheld microphone, paired with the UHF410-Base-F8 receiver to cover vocalists, hosts, speakers, or anyone else who needs to move freely while presenting. It's part of the UHF410 range, built for professional use across live shows, conferences, and events.

A condenser capsule for more detail.

The UHF410-Hand-F8 runs a condenser capsule, picking up the nuances and higher frequencies of a voice more precisely than a standard dynamic capsule would. A solid choice for performances where vocal detail really counts, whether that's singing or demanding spoken-word work.

True Diversity transmission, not just reception.

Where most handheld transmitters run off a single antenna, the UHF410-Hand-F8 builds True Diversity transmission right into the mic itself, for a more stable link straight from the source. 442 programmable channels, with SYNC to push the receiver's setting straight to the transmitter, no manual setup on either end. An LCD display shows channel and remaining battery life.

A rugged metal body that feels right in hand.

Smooth-finish metal housing that holds up well through extended use. A built-in mute switch cuts the signal without powering the mic down, handy between speaking segments.

Key features:

Wireless handheld mic, condenser capsule

True Diversity transmission

442 programmable channels, SYNC function

LCD display: channel, battery level

Metal body, built-in mute switch

Average 10-hour runtime (2 AA batteries, not included)
