Family	**UHF410**
Length	**10 m**
Connector	**BNC male/male**

Overview

Get your antenna clear across the room from your booth.

The UHF410-Rall10m runs the antenna connection on a UHF410 receiver out by 10 meters, with male BNC connectors on both ends. On the receiver side, the BNC socket is female, so the cable screws straight in. On the UHF410-Ant antenna side, the connector is also male, so a female-to-female junction is needed, either the UHF410-BNC1 coupler or one of the antenna holders (UHF410-Hold / UHF410-Ant-Hold), which double as junctions too.

Key features:

10-meter antenna extension cable

Male BNC connectors on both ends

Connects directly to the receiver's female socket

Requires a female-to-female junction on the antenna side (UHF410-BNC1, UHF410-Hold or UHF410-Ant-Hold)
